

YTD 2024 US repricing volume at over US\$300bn

LSEG | September 18, 2024

Nearly US\$310bn of completed US loan volume represents repriced credits so far this year. After a surge of repricing activity in 2Q24, the market slowed amid limited summer calendar, but borrowers have returned to tap lenders for US\$7.3bn in repricing activity in September along (nearly US\$2bn of this total has already closed). Getting off to a strong start this week, Kito Crosby, ION Analytics and ECI have all announced repricing loans.
